

Research and Development in the Healthcare Industry

Short description:

Research and Development of (Bio-)Medical Software Prototypes for the Healthcare Industry

Goal:

The aim of this interdisciplinary project between Computer Science and Medicine is to design and implement (bio-)medical software prototypes for the healthcare industry. The project will be carried out in cooperation with Siemens Healthcare in Forchheim, Germany.

Note: Biomedical Engineering Students are welcome!

Keywords:

Medical Image Processing, Prototyping, Deep Learning, Computer Vision, Detection, Visualization, Machine Learning, Computed Tomography
